Maximum Weight Loading and Fixing

1. Overview and Definitions for Maximum Weight Loadings and Fixing.

Product: VERSA Shelving Systems

- The Uniformly Distributed Loading (UDL) is defined by the load being evenly distributed across an individual shelf, as well as equally shared across multiple levels of shelving.
- All Wall Mounted Shelving (single sided) with heights of 2100mm and above are to be secured to the wall utilising the GD-V-WFB Wall Bracket or similar solution. 2400mm heights require 2x GD-V-WFB Wall Bracket or similar solution. Refer to CONFIGURATION 3 in Versa Assembly Instructions.
- GD-V-WFB Wall Bracket (or similar solution) to be positioned within 100mm from the top of the post (any Height). If 2400mm height, position 2nd GD-V-WFB Wall Bracket 600mm down from first bracket. Refer to CONFIGURATION 3 in Versa Assembly Instructions.
- You must ensure the means of fixing and walls are able to safely absorb and transfer the resulting loads. It is the responsibility of the End User to determine if this requires certification by engineer or other appropriate persons.
- To achieve UDL, ensure that all shelving brackets are properly fitted. The shelf also must not be subjected to impact loads.
- For double sided gondolas the same maximum loads can be applied to both sides of the gondola provided all bays are level prior to load being applied, refer to CONFIGURATION 4 in versa instruction manual.
- Note: Shelving and Base loads have independent UDL ratings and must be treated separate in calculating overall UDL rating. See table 1 and Table 2 below. Overall UDL calculations and formula as provided on Table 3.

Table. 3

Permissible total load (kg) per bay (Excluding base shelf)							
Total Maximum height of upright 2410mm *	Permissible total load in KG for an average depth as calculated in Image A. <i>Note: Refer to table below for minimum depth of base shelf depth.</i>						
	Average Depth (mm)	≤ 250	≤ 300	≤ 350	≤ 370	≤ 400	≤ 450
Min. Base Shelf Depth (mm)	350	350	400	470	450	570	570
60x30mm Post (kg)	300	280	260	250	230	210	200
80x30mm Post (kg)	440	430	410	400	380	360	350

* Maximum permissible load is only valid for Single Sided Shelving Display if Upright posts are secured to wall, noting requirements as mentioned in Section 1 of this document.

Image. A

Calculation of the average depth:

The average depth is calculated from the sum of the depths of all shelves in mm (not including the base shelf) divided by the number of shelves

Example:

Sum of all shelves not including base leg shelf:

$$370 + 470 + 470 + 470 + 570 = 2350$$

Number of shelves not including base shelf = 5

$$(2350 / 5) = 470\text{mm} + \text{Base shelf of 570mm required}$$

Note: If the calculated Average depth does not match one of the Average Depths as shown in Table 3, round up to the next shelf size.

(e.g. 420mm round up to 450mm).

5. Maximum Weight Loads and Fixing for the End Caps

Product: VERSA End Cap

The Uniformly Distributed Loading (UDL) is defined by the load being evenly distributed across the entire shelving, as well as equally shared across multiple levels of shelving.

Table. 4

Maximum UDL total (kg) VERSA End Cap with shelving						
Height mm	1210	1410	1510	1810	2110	2410
